WARNING:
This procedure is moderately difficult. DO NOT ATTEMPT if you don’t have decent automotive mechanical knowledge, proper tools or you don’t pay attention to details. Before starting, read through the entire procedure thoroughly. If you feel competent enough to handle this, take your time and follow the instructions carefully. If you feel that you are not capable of completing any of the steps, call TOTAL CHAOS to assist you with other options to help you install these items.

Tools Required for install:
- Propane torch
- Pliers
- Pry bar
- Mallet
- Alignment pin (to align bolt holes)
- 22mm Wrench & Socket
- 19mm Wrench & Socket
- Ratchet
- Safety Glasses
- Gloves

ATTENTION:
Ensure there is a full, working fire extinguisher (ABC classified) near you while performing this procedure.
Always wear safety glasses or some form of eye protection.

TOTAL CHAOS Fabrication Inc. is not responsible for any damage or injury that occurs while performing this procedure. These instructions are offered as a guide to assist our customers. It is the customer’s responsibility to judge their competence on completing this procedure. TOTAL CHAOS Fabrication Inc. manufactures and sells products intended for off-road use only and carry no warranty whatsoever. Due to a number of factors, including but not limited to, driving conditions, terrain, driver competence, quality of installation, vehicle maintenance, vehicle condition, and vehicle modifications, the customer releases TOTAL CHAOS Fabrication Inc. from any liability caused by product or installation failure.

Ensure the vehicle is on level ground before beginning.

For all questions, contact TOTAL CHAOS Fabrication @ (951) 737-9682 M-Th 8:00 AM - 5:00 PM
1. Before going underneath the vehicle, ensure that the emergency brake is applied, the transmission is in park (if applicable) and that wheel chocks will keep the vehicle from rolling.

2. Using a socket or wrench, loosen and remove the bolts that attach the rack and pinion to the frame.

3. Pull the rack and pinion back far enough so there is enough room to access the backside of the driver side bushing. If necessary use a pry bar on the DRIVER SIDE of the rack in between the two bushings to pull the rack back. Prying on the black side of the rack can cause it to break.

4. The rack will hang by the steering shaft, tie-rods and the power steering hoses. Remove the D-shaped bushing from the passenger side.

5. ENSURE THERE IS A WORKING ABC CLASSIFIED FIRE EXTINGUISHER NEAR YOU BEFORE BEGINNING THIS STEP! With a propane torch, heat the metal inner sleeve of the bushings inside of the rack until the bushing is soft enough that you can remove the inner sleeve with a pair of pliers. The rubber bushings will smoke and may catch fire.

6. Once the inner sleeves are removed, pull the remaining rubber bushings from the rack with a pair of pliers. Wipe off any excess rubber from the inside of the holes.

7. Coat the inside and outside of the new rack bushings with a generous amount of grease. Slide the bushing halves into their proper locations on the rack. Insert the inner sleeves into the rack bushings. Use a mallet to tap them in until flush with the bushing.

8. Attach the new D-shape bushing (#3) to the rack.

9. Push the rack back into its proper location. Align the center bolt hole (#2) and then insert the bolt. Attach the cap back onto the D-shaped bushing. Insert driver side bolt (#1) using factory hardware. (TUNDRA ONLY – Put supplied washer between the rack and the frame behind driver side bushing.)

10. Tighten the nuts to the bolts to approximately 80 ft./lbs. of torque.
